Abstract Algebra

In algebra,
which is a broad
division of
mathematics,
abstract algebra
is the study of
algebraic
structures.
Algebraic
structures
include groups,
rings, fields,

modules, vector spaces, lattices, and algebras. The term abstract algebra was coined in the early 20th century to distinguish this area of study from the other parts of algebra.

Algebraic
structures, with
their associated
homomorphisms,
form
mathematical
categories.
Category theory
is a formalism
that allows a
unified way for
expressing

Abstract algebra
is about
patterns. You
see one pattern
repeating itself
across
mathematics and
you try to
extract the

essential elements of that pattern and turn them into a definition. This process gives you groups, rings, fields, vector spaces, etc. You then study each of these new algebraic objects and become

familiar with it.
