Practical in its approach, Applied Bayesian Forecasting and Time Series Analysis provides the theories, methods, and tools necessary for forecasting and the analysis of time series. The authors unify the concepts, model forms, and modeling requirements within the framework of the dynamic linear mode (DLM).

Applied Bayesian Forecasting and Time Series Analysis includes a complete theoretical development of the dynamic linear model, with each step demonstrated with analysis of real time series data. The result is a clear presentation of the Bayesian paradigm: quantified subjective judgments derived from selected models applied to time series observations.
