TITLE: A Colour Atlas and Text of Clinical Medicine. AUTHORS: Professor of Medicine Charles D. Forbes D.Sc., M.D., F.R.C.P., F.R.S.E. Ninewells Medical School...Dundee Scotland. Consultant:Dept. of Medicine William. F Jackson, M.A., M.B., B.Chir., M.R.C.P. Guy's Hospital London, England.

This best-selling atlas provides medical, dental, allied health, and biology students with an outstanding collection of histology images for all of the major tissue classes and body systems. This is a concise lab atlas with relevant text and consistent format presentation of photomicrograph plates. With a handy spiral binding that allows ease of use, it features a full-color art program comprising over 500 high-quality photomicrographs, scanning electron micrographs, and drawings. Didactic text in each chapter includes an Introduction, Clinical Correlations, Overview, and Chapter Summary.

A concise, colorful alternative to more detailed textbooks of medicine, this latest edition incorporates a large number of color photographs to show key presenting signs and symptoms as they are seen in practice. Offering a remarkable value, it features over 1,500 illustrations including clinical photographs, endoscopic images, ultrasound scans, ECG's, and summary tables. In addition to the illustrations, the book provides concise accompanying text, detailed legends, and Key Facts boxes to make exam revision easier. An unrivalled collection of clinical images depicts presenting signs and trains the reader to recognize the physical signs of underlying disorders. Focusing on only the essential concepts, it makes

learning and retention much easier. A convenient and portable size makes the book more manageable and appealing. A more accessible writing style, with headings and bullet points, assists speed reading and review. Key Facts boxes increase retention. Color photos and imaging pictures (CTs/MRIs) have been improved.

Clinical Embryology: A Color Atlas and Text unravels and illuminates the complex process of both normal and abnormal prenatal human developments. Vivid color drawings and photographs, many in three dimensions, clarify difficult concepts and bring contemporary clinical examples to life. Each section of the atlas includes pertinent case reports, clinical photographs, radiologic studies, and examples from the pathology lab - emphasizing the importance of embryology across the field of medicine.

Still unique in the field, this text combines color photographs and full-color artwork in one convenient resource. The dissections are amazingly clear, almost 3-D in appearance, and color-coded artwork next to each photo makes anatomy easy to interpret and identify. Spanish version of 2nd edition also available, ISBN: 84-8086-118-5

A bestselling author has gathered nearly 4,000 medical images for this one-of-a-kind approach to diagnosis. For each condition examined, the text presents several images from multiple perspectives that together provide a clear picture for obtaining an accurate identification.

High-quality clinical photos help make this a comprehensive yet succinct overview of the subject which can be used as a 'bedside' companion.

Provides students with information on the structure and function of tissues and organs at the cellular level. Hystophysiologic and clinical information feature at the beginning of each chapter and thumbnail illustrations have been added to the legend.

Thoroughly updated to reflect all of the latest concepts and advances in the field, this concise, extensively illustrated text presents the basic science and clinical application of cellular and molecular biology. Functioning as a combined text and atlas, it is essentially two books for the price of one providing a comprehensive, visually engaging histology education from the ground up. Illustrations, tables, chapter summaries and multiple choice questions facilitate comprehension of concepts, and clinical correlations underscore the practical relevance of the material. Superb illustrations—including photomicrographs, electron micrographs, schematic diagrams and drawings—provide a visual grasp and easier retention of difficult concepts. Clinical correlations throughout the text demonstrate clinical applications and reinforce the idea that histology is pertinent not only to pathology and physiology, but in fact comprises one of the essential bases of clinical practice. New! "Pathological Considerations" section at the end of each chapter. Helpful tables provide an at-a-glance summary statement of key points. Bolded key terms, bulleted lists and chapter summaries emphasize the "need to know" information in every chapter. A combination of USMLE-style questions and image based questions in each chapter.

The neuroendocrine system is fascinating. It is an intriguing, complex system. For centuries, it has sustained the interest of scientists, who have provided the community with a wealth of information on neuroendocrine tumors types—history, genetics, clinical presentation, surgical pathology, differential diagnoses...on everything except cytopathology...until now. This one-of-a-kind color atlas fills a long-standing void in neuroendocrine resources. This atlas provides clear, descriptive information on the

cytopathology of neuroendocrine tumor types and differential diagnoses in one cutting-edge, comprehensive resource. This unique atlas is dedicated exclusively to providing expert, illustrated coverage of the cytopathology of neuroendocrine tumors.
