We live in a time of relentless change. The only thing that's certain is that new challenges and opportunities will emerge that are virtually unimaginable today. How can we know which skills will be required to succeed? In Five Minds for the Future, bestselling author Howard Gardner shows how we will each need to master "five minds" that the fast-paced future will demand: · The disciplined mind, to learn at least one profession, as well as the major thinking (science, math, history, etc.) behind it · The synthesizing mind, to organize the massive amounts of information and communicate effectively to others · The creating mind, to revel in unasked questions - and uncover new phenomena and insightful apt answers · The respectful mind, to appreciate the differences between human beings - and understand and work with all persons · The ethical mind, to fulfill one's responsibilities as both a worker and a citizen Without these "minds," we risk being overwhelmed by information, unable to succeed in the workplace, and incapable of the judgment needed to thrive both personally and professionally. Complete with a substantial new introduction, Five Minds for the Future provides valuable tools for those looking ahead to the next generation of leaders - and for all of us striving to excel in a complex world. Howard Gardner cited by Foreign Policy magazine as one of the one hundred most influential public intellectuals in the world, and a MacArthur Fellowship recipient is the Hobbs Professor of Cognition and Education at the Harvard Graduate School of Education.

This brilliant and revolutionary theory of multiple intelligences reexamines the goals of education to support a more educated society for future generations. Howard Gardner's concept of multiple intelligences has been hailed as perhaps the most profound insight into education since the work of Jerome Bruner, Jean Piaget, and even John Dewey. Here, in The Disciplined Mind, Garner pulls together the threads of his previous works and looks beyond such issues as charters, vouchers, unions, and affirmative action in order to explore the larger questions of what constitutes an educated person and how this can be achieved for all students. Gardner eloquently argues that the purpose of K-12 education should be to enhance students' deep understanding of the truth (and falsity), beauty (and ugliness), and goodness (and evil) as defined by their various cultures. By exploring the theory of evolution, the music of Mozart, and the lessons of the Holocaust as a set of examples that illuminates the nature of truth, beauty, and morality, The Disciplined Mind envisions how younger generations will rise to the challenges of the future while preserving the traditional goals of a humane education. Gardner's ultimate goal is the creation of an educated generation that understands the physical, biological, and societal world in their own personal context as well as in a broader world view. But even as Gardner persuasively argues the merits of his approach, he recognizes the difficulty of developing one universal, ideal form of education. In an effort to reconcile conflicting educational viewpoints, he proposes the creation of six different educational pathways that, when taken together, can satisfy people's concern for student learning and their widely divergent views about knowledge and understanding overall.

An authority on the human mind reflects on his intellectual development, his groundbreaking work, and different types of intelligences including his own. Howard Gardner's Frames of Mind was that rare publishing phenomenon: a mind-changer. Widely read by the general public as well as by educators, this influential book laid out Gardner's theory of multiple intelligences. It debunked the primacy of the IQ test and inspired new approaches to education; entire curricula, schools, museums, and parents' guides were dedicated to the nurturing of the several intelligences. In his new book, A Synthesizing Mind, Gardner reflects on his intellectual development and his groundbreaking work, tracing his evolution from bookish child to eager college student to disengaged graduate student to Harvard professor. Gardner discusses his mentors (including Erik Erikson and Jerome Bruner) and his collaborators (Mihaly Csikszentmihalyi, William Damon, and others). Comedian Groucho Marx makes a surprise (non-)appearance, declining Gardner's invitation to chat with Harvard College students, in favor of "making a living." Throughout his career, Gardner has focused on human minds in general, or on the minds of particular creators and leaders. Reflecting now on his own mind, he concludes that his is a [synthesizing mind] with the ability to survey experiences and data across a wide range of disciplines and perspectives. The thinkers he most admires including historian Richard Hofstadter, biologist Charles Darwin, and literary critic Edmund Wilson are exemplary synthesizers. Gardner contends that the synthesizing mind is particularly valuable at this time and proposes ways to cultivate a possibly unique human capacity.

'An addictive read that will remain with you long after you emerge from the rabbit hole' - THE TIMES 'A marvellously twisty whodunnit [with] the brutal, clockwork ingenuity of an Agatha Christie mystery' - FT 'A pacy, exciting and most unusual crime story' - GUARDIAN

SHARING A BODY CAN BE MURDER The Earth's spiralling population has finally been controlled. Lifespans are limited to eighty years, except for those who make an extreme choice: to become a commune. Five minds sharing one body, each living for four hours at a time. But with a combined lifespan of nearly 150 years. Alex, Kate, Mike, Sierra and Ben have already spent twenty-five years together in what was once Mike's body, their frequent personality clashes leading to endless bickering, countless arguments, and getting themselves stranded on a Russian Arctic freighter. Wanting to buy upgrades for their next host body, they decide to travel to a Death Park where time can be gambled like money. But things go very wrong when Kate accepts a dangerous offer, and one of them disappears. Someone is trying to kill off members of the commune. But why? Is one of them responsible? Or is an outsider playing a deadly game? It's hard enough to catch a murderer. It's almost impossible when you might be sharing a body with them... This brilliant murder mystery blends classic crime with speculative fiction in a stunning debut.

"This clever, twisty debut really delivers. Gripping, well-written and intriguing on every level" - SARAH PEARSE 'Brilliantly inventive. If you liked The Seven Deaths of Evelyn Hardcastle, you'll love this' - EVE SMITH 'Morpus is set to become a powerhouse in speculative crime. A feast of a book' - HELEN FIELDS 'A whip-smart, searing debut, which grinds into the mind like cursed clockwork' - MATT WESOLOWSKI 'A mind-stretching and irresistible premise deftly spun into a twisty, page-turning action-thriller' - PHILIPPA EAST 'Consider my single mind blown! An astonishing and original concept, deftly executed' - DAVID JACKSON 'A mind-bendingly original debut. Nothing short of a cross-genre masterpiece' - ADAM CHRISTOPHER 'The world-building of Gibson with the pace of The Running Man. A fantastic ride' - TIM GLISTER

Think about the last time you tried to change someone's mind about something important: a voter's political beliefs; a customer's favorite brand; a spouse's decorating taste. Chances are you weren't successful in shifting that person's beliefs in any way. In his book, Changing Minds, Harvard psychologist Howard Gardner explains what happens during the course of changing a mind and offers ways to influence that process. Remember that we don't change our minds overnight, it happens in gradual stages that can be powerfully influenced along the way. This book provides insights that can broaden our horizons and shape our lives.

Science world luminary John Brockman assembles twenty-five of the most important scientific minds, people who have been thinking about the field artificial intelligence for most of their careers, for an unparalleled round-table examination about mind, thinking, intelligence and what it means to be human. "Artificial intelligence is today's story--the story behind all other stories. It is the Second Coming and the Apocalypse at the same time: Good AI versus evil AI." --John Brockman More than sixty years ago, mathematician-philosopher Norbert Wiener published a book on the place of machines in society that ended with a warning: "we shall never receive the right answers to our questions unless we ask the right questions.... The hour is very late, and the choice of good and evil knocks at our door." In the wake of advances in unsupervised, self-improving machine learning, a small but influential community of thinkers is considering Wiener's words again. In Possible Minds, John Brockman gathers their disparate visions of where AI might be taking us. The fruit of the long history of Brockman's profound engagement with the most important scientific minds who have been thinking about AI--from Alison Gopnik and David Deutsch to Frank Wilczek and Stephen Wolfram--Possible Minds is an ideal introduction to the landscape of crucial issues AI presents. The collision between opposing perspectives is salutary and exhilarating: some of these figures, such as computer scientist Stuart Russell, Skype co-founder Jaan Tallinn, and physicist Max Tegmark, are deeply concerned with the threat of AI, including the existential one, while others, notably robotics entrepreneur Rodney Brooks, philosopher Daniel Dennett, and bestselling author Steven Pinker, have a very different view. Serious, searching and authoritative, Possible Minds lays out the intellectual landscape of one of the most important topics of our time.

A framework for overcoming the six types of innovation killers Everybody wants innovation or do they? Creative People Must Be Stopped shows how individuals and organizations sabotage their own best intentions to encourage "outside the box" thinking. It shows that the antidote to this self-defeating behavior is to identify which of the six major types of constraints are hindering innovation: individual, group, organizational, industry-wide, societal, or technological. Once innovators and other leaders understand exactly which constraints are working against them and how to overcome them, they can create conditions that foster innovation instead of stopping it in its tracks. The author's model of constraints on innovation integrates insights from the vast literature on innovation with his own observations of hundreds of organizations. The book is filled with assessments, tools, and real-world examples. The author's research has been featured in the New York Times, Wall Street Journal, London Guardian and San Jose Mercury News, as well as on Fox News and on NPR's Marketplace Includes illustrative examples from leading organizations Offers a practical guide for bringing new ideas to fruition even within a previously rigid organizational culture This book gives people in organizations the conceptual framework and practical information they need to innovate successfully.

This is for anyone who's curious about rethinking their thinking or unleashing the extraordinary potential of the human mind.

An international panel of distinguished experts explores the balance between creativity and wise action, and calls for educators to nurture "wise creativity" in their students.

New York Times Bestseller An exciting--and encouraging--exploration of creativity from the author of When: The Scientific Secrets of Perfect Timing The future belongs to a different kind of person with a different kind of mind: artists, inventors, storytellers-creative and holistic "right-brain" thinkers whose abilities mark the fault line between who gets ahead and who doesn't. Drawing on research from around the world, Pink (author of To Sell Is Human: The Surprising Truth About Motivating Others) outlines the six fundamentally human abilities that are absolute essentials for professional success and personal fulfillment--and reveals how to master them. A Whole New Mind takes readers to a daring new place, and a provocative and necessary new way of thinking about a future that's already here.
