This book examines the concept of the democratization of governance in universities in Kenya with particular emphasis on students involvement in governance processes and decision making. Data were collected from members of the student community utilizing a structured self-administered questionnaire and from purposively selected key informants and focus group discussants drawn from Kenyatta University (representing the public sector) and the United States International University (representing the private sector). The guiding argument for the study was that shared governance, one of the principles of good governance, is critical in enabling the universities to deliver their visions and the missions effectively. The results revealed that while in principle, Kenyan universities have embraced democratic governance in which all stakeholders, including students, have a role to play, in practice they continue to violate the core principles of good governance, particularly shared governance. Specifically, students, who are major stakeholders in university education, are largely excluded from significant structures of governance thereby limiting their influence and participation. Although their representation is mainly provided via student self-governance organs (unions, associations and/or councils), their effectiveness is undermined considerably by the lack of trust and confidence of the student body and the unending manipulation by top university administrators and external political actors. Student active involvement in decision making is mainly confined to lower levels such as the school/faculty and departmental/programme. The authors call for a paradigm shift in the involvement of students in the governance of universities in ways that discourage the current culture of tokenism and political correctness that characterizes public and private universities in Kenya.

This book advances an in-depth, comprehensive analysis of flagship universities in Africa – the largest, most selective, and most prestigious universities on the continent. The book draws on a range of country-specific case-studies, including Botswana, Egypt, Ethiopia, Ghana, Kenya, Mauritius, Nigeria, Senegal, Tanzania and Zambia, to explore a range of issues associated with flagship universities and their role in higher education in Africa. . Newly-established institutions in new nation states, and states emerging from conflict, often rely on these flagship universities to train their academics, and build their intelligentsia; flagship universities are thus capacity-builders and trend-setters in their respective countries and sub-regions. This volume brings together a range of scholars to celebrate the impact, influence and contributions of African universities, not only within Africa, but across the globe The book will be of great significance to students and researchers in the field of education, particularly those with an interest in sociology and politics of higher education.

Soil fertility refers to the ability of a soil to supply plant nutrients. Bioavailable phosphorus is the element in soil that is most often lacking. Nitrogen and potassium are also needed in substantial amounts. For this reason these three elements are always identified on a commercial fertilizer analysis. For example a 10-10-15 fertilizer has 10 percent nitrogen. Inorganic fertilizers are generally less expensive and have higher concentrations of nutrients than organic fertilizers. Also, since nitrogen, phosphorus and potassium generally must be in the inorganic forms to be taken up by plants, inorganic fertilizers are generally immediately bioavailable to plants without modification. However, some have criticized the use of inorganic fertilizers, claiming that the water-soluble nitrogen doesn't provide for the long-term needs of the plant and creates water pollution.
