transmission of information by microwave radio waves. Although an experimental 40-mile microwave telecommunication link across the English Channel was demonstrated in 1931, the development of radar in World War II provided the technology for practical exploitation of microwave communication. The technologies are much different, but each has its place, its strengths, and its weaknesses. Wireless communications relies on the transmission and reception of RF/microwave signals modulated with the information to be carried while optical communications uses modulated light beamed through fiber-optic cables.
