The letters in the made-up term “ TRIAC ” stand for parts in a paragraph. These parts might be sentences or they could be chunks several sentences long, as you will see in my examples. Here are the letters, what they stand for, and some “ key terms ” that often appear at the beginning of the sentence or “ chunk ” corresponding to the letter.

Theory: An TRIAC is a device which can be turned on through the gate pulse for both positive and negative values of  $V_{AK}$  and turned off using power circuit i.e., turn on is controlled but turn off is uncontrolled in a TRIAC. The voltage at which the TRIAC gets into conduction state is called forward breakover voltage( $V_{BO}$ )

bidirectional triode thyristor, or triac. The triac (shown in Fig.

Triac Tutorial. A Triac is a high-speed solid-state device that can switch and control AC power in both directions of a sinusoidal waveform. Being a solid state device, thyristors can be used to control lamps, motors, or heaters etc. However, one of the problems of using a thyristor for controlling such circuits is that like a diode, the “ thyristor ” is a unidirectional device, meaning that it passes current in one direction only, from Anode to Cathode.
