Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.

Issues in Financial Accounting addresses the controversial issues in financial accounting that have been debated by the preparers, users, auditors and regulators of financial statements. Throughout the text, academic studies and professional accounting research are referenced to also provide a critical understanding of historical debates in financial accounting. The new 15th edition covers significant recent developments to the accounting standards in Australia and is based on the AASB standards and interpretations that have been issued up to the end of 2012. This includes the Australian Accounting Standard Board's (AASB) program of changes to make accounting standards equivalent to International Financial Reporting Standards.
