The plant explorers of Kew Gardens Rivertowns: 100 Miles, 200 Years, Countless Stories
The Plant Hunters Two Hundred

The Plant Hunters offers an extraordinary look into the lives of the men who travelled the world in search of plants and seeds to document and send back to Britain. From the early travels of Sir Joseph Banks, who sailed with Captain Cook and the Endeavour in 1768, to the more recent adventures of Frank Kingdon-Ward in the early 1900s, this book tells the tales of these brave and dedicated botanists who spent years, in often unfavourable conditions, gathering specimens.

Nonfiction Book Review: The Plant Hunters: Two Hundred ...

Scotland has, over the last two hundred years or so produced some of the worlds most successful Plant Hunters. This unique garden celebrates their fascinating lives and their amazing contribution to the way our gardens look today. In the eighteenth century plant hunting became a profession that sent individuals on voyages round the world to discover and collect new plants.

This is the story of the men who discovered and brought back a wealth of exotic new plants. Journeying through remote and beautiful lands, often in great peril, they collected the plants that shaped western garden design for 200 years. The stories are illustrated with portraits, photographs and maps.

Presents the experiences and contributions of early adventurers, explorers, and scientists responsible for discovering and documenting new types of plants, showing how their often dangerous voyages help establish the field of botany.

Old Herbaceous sat, propped amongst his cushions, by the cottage window, surveying the Manor gardens he'd so lovingly tended for so many years. Gardens! He let his thoughts wander through the scented past. He had started as a nobody, an abandoned baby found on the doorstep who, as a boy with a gammy leg and a passion for flowers, never seemed to fit in. But with tender mentoring and the luck of a prize at the flower show, young Herbert had become a somebody. Old Herbaceous traces his journey from young help to head gardener and although things were different than in his day, the world had started with a garden and things that old don't disappear so easily.

From Queen Hatshepsut's journey to the land of Punt in 1482 B.C. to modern botanical expeditions, here is a vivid account of botanists, their travels, and the interesting, valuable specimens they brought back to their gardens and laboratories. Mr. Whittle first surveys the history of collecting prior to the time of Nathaniel Ward, the inventor of the portable greenhouse, then explains the scientific techniques of plant hunting developed by Ward. And, finally, he tells of the "Scramble for Green

Treasure" to the far corners of the earth that followed in Ward's wake and he explores the gradual development of the methods botanists are using now.

Driven by an all-consuming passion, the plant hunters traveled around the world, facing challenges at every turn: tropical illnesses, extreme terrain, and dangerous animals. They battled piranhas, tigers, and vampire bats. Even the plants themselves could be lethal! But these intrepid eighteenth- and nineteenth-century explorers were determined to find and collect new and unusual specimens, no matter what the cost. Then they tried to transport the plants—and themselves—home alive. Creating an important legacy in science, medicine, and agriculture, the plant hunters still inspire the scientific and environmental work of contemporary plant enthusiasts. Working from primary sources—journals, letters, and notes from the field—Anita Silvey introduces us to these daring adventurers and scientists. She takes readers into the heart of their expeditions to then-uncharted places such as the Amazon basin, China, and India. As she brings a colorful cast of characters to life, she shows what motivated these Indiana Jones-type heroes. In *The Plant Hunters*, science, history, and adventure have been interwoven to tell a largely forgotten—yet fascinating—story.
